Vulnerability Assessment Service: Providing ongoing cybersecurity peace of mind

In today's fast-moving digital landscape, cyber threats are more sophisticated than ever. To stay protected, organisations must take a proactive stance - identifying and addressing system weaknesses before they're exploited.

Assure Technical's Vulnerability Assessment Service delivers exactly that: a clear, effective way to uncover and mitigate risks using an NCSC-approved scanning tool - all conducted remotely, with zero on-site disruption.

What We Do

We scan. We identify. We inform.

- **Comprehensive Vulnerability Scanning** - Using a trusted and government-recognised tool, we analyse your internet-facing infrastructure and internal systems for known vulnerabilities.
- **Remote Delivery** - Assessments are conducted without the need for on-site visits, keeping your business running without interruption.
- **Clear Reporting** - You receive a concise, prioritised report outlining identified vulnerabilities and recommended next steps - helping you take action fast.
- **Affordable Peace of Mind** - Pricing starts from just £250 per assessment, making proactive cybersecurity accessible for businesses of all sizes.

Why It Matters

Supports Year-Round Cyber Essentials Compliance - Vulnerability scanning is a key component of the Cyber Essentials Plus audit process. Conducting these at more regular intervals helps ensure your systems are free from high-risk vulnerabilities throughout the year.

Improves Your Security Posture - The assessment identifies unsupported software, missing patches, and misconfigurations, giving you peace of mind that your cyber defences are current and robust.

Minimises Risk & Downtime - By proactively detecting vulnerabilities, the service helps prevent data breaches and system compromise, all while being delivered remotely to avoid disruption to your business operations.

Perfect For:

- Organisations maintaining Cyber Essentials certification
- Businesses without in-house cybersecurity teams
- IT teams seeking external validation
- Companies with remote or distributed workforces
- Organisations handling sensitive data or operating in regulated sectors
- SMEs looking to strengthen their security posture

Key Features

- NCSC-approved scanning technology
- Remote assessment with zero disruption
- Easy-to-understand reporting
- Aligned with Cyber Essentials requirements
- Actionable remediation advice

Whether you're ensuring ongoing Cyber Essentials compliance or looking for greater peace of mind, our Vulnerability Assessment Service provides the insights and support you need to stay secure, compliant, and in control of your cybersecurity.
